PROFILE

Computer Science undergraduate and self-directed developer working on AI gateways, agent runtimes and web applications. Project experience spans TypeScript, Python, Rust and Solidity, with a focus on modular architecture, API integration and developer tooling. Seeking junior software development opportunities.

SKILLS

Languages: TypeScript, JavaScript, Python, Rust, Solidity, SQL
Web & APIs: React, Next.js, Node.js, Bun, Hono, FastAPI, REST APIs
Data & tooling: PostgreSQL, MySQL, SQLite, Git, Docker, GitHub Actions
Engineering: LLM integration, agent tool loops, MCP, automated tests, smart contracts

PROJECT EXPERIENCE

DMR-X — AI Gateway & Adaptive Routing

Independent project
https://github.com/danny-dis/dmr-X
• Developing a local-first AI gateway with configurable provider/model routing and fallback paths, separating routing from application orchestration.
• Work includes provider management, model integration and a React interface for configuring the gateway.
TypeScript, Bun, React, Vite

MOTE — Minimal Agent Execution Engine

Independent project
https://github.com/danny-dis/MOTE
• Developed a compact model-and-tool execution engine with capability grants, provider fallback and bounded runs.
• Created library/CLI interfaces and a bridge for application-owned Python and TypeScript tools.
Rust, Python, TypeScript

Decentralized Voting System — University Project & Continued Development

Solo extension of an open-source project
https://github.com/danny-dis/Decentralized-Voting-System
• Independently extended an existing Ethereum voting application with multi-election management, admin/voter interfaces and improved MetaMask handling.
• Subsequently rebuilt the local application as a multi-tenant Next.js/Hono platform with PostgreSQL, blockchain event indexing and SSE results streaming.
• Added contract-level Merkle eligibility checks, nullifier-based repeat-vote controls and results certification, alongside backend role checks and test suites; integration remains in progress.
Solidity, TypeScript, Next.js, PostgreSQL

Chimera — Multi-Agent Coding Workspace

Independent project
https://github.com/danny-dis/chimera
• Developing a modular coding-agent workspace with solo, duo and trio coordinator implementations.
• Work covers provider integration, tool loops, context handling, session management and developer interfaces.
TypeScript, Node.js, React, Git worktrees

Other projects: Drift: Python/FastAPI and React workspace for ideas, repository context and source-linked research. Happy Teens Movie App: first university software project.

EXPERIENCE

Industrial Attachment — Centrino Technologies Limited

June–August 2024 | Nairobi, Kenya
• Completed video-based MySQL training and knowledge-check assessments, with guidance from technical staff at a financial-services software company.

EDUCATION

BSc Computer Science (in progress) — Murang'a University of Technology; expected graduation 2027.
Nkubu High School | 2016–April 2021 | KCSE: B (plain)
