

Dismas Muriuki Mutabari

****Software Engineer | AI Systems | Blockchain | Full-Stack****

Ø=Üç muriukidismas9@gmail.com • Ø=Ý github.com/danny-dis • Ø<ß Kenya (EAT/UTC+3) • Ø=Ü¼ Open to Remote

SUMMARY

Self-directed software engineer with 1+ year of intensive project development, having independently built and shipped 16+ production-grade systems spanning AI agent architectures, multi-provider LLM routing, blockchain voting platforms, and security tools. BSc Computer Science candidate (expected 2026). Seeking remote roles with European, American, or Asian teams where I can contribute immediately and grow into a mid-level engineering role.

TECHNICAL SKILLS

****Languages:**** TypeScript, Python, Rust, Solidity, Go, JavaScript, SQL

****AI/LLM:**** Agent architectures, MCP, multi-agent orchestration, RAG, LLM routing, prompt engineering, tool-use loops

****Backend:**** Node.js, FastAPI, REST/WebSocket/SSE/GraphQL, microservices, PostgreSQL, MongoDB, Neo4j

****Frontend:**** React, Next.js, Tauri, VS Code extensions, WebSocket streaming

****Blockchain:**** Solidity, OpenZeppelin, Foundry, Base L2, Privy/MetaMask, HTLC escrow

****DevOps:**** Docker, CI/CD, GitHub Actions, Tauri desktop builds, Git worktrees

PROJECTS

A.R.G.U.S — AI Autonomous Red Teaming Platform

Lead Engineer & Architect | github.com/danny-dis/argus

Multi-facet hive mind AI platform for autonomous penetration testing. Deploys specialized agents across a tiered defense model (Core/SHIELD/SENTINEL) with minimal human supervision.

- 244+ Python files across 28 specialist agent folders (recon, OSINT, exploitation, lateral movement, cloud, container, IoT, wireless)
- Committed exploitation loop: fingerprint !' match CVE/PoC !' develop !' run !' verify via deterministic oracle
- 8-phase MasterAgent lifecycle + AgentBus for deterministic specialist dispatch
- 7-layer memory architecture with content-addressed storage and trust scoring

****Tech:**** Python, LangChain, MongoDB, Neo4j, WebSockets, MITRE ATT&CK

Chimera — Parallel Multi-Agent Coding Platform

Lead Engineer & Architect | github.com/danny-dis/chimera

Terminal-native coding platform deploying 2-3 agents across different providers in parallel — cheap model for bulk work, frontier model for verification, challenger for complex tasks.

- Draft !' Verify !' Challenge !' Synthesize pipeline with different model/provider per stage
- Cost-aware routing with configurable caps (per-task, per-session, per-day)
- Agent Relay Racing: monitors context fill, triggers graceful handoff before degradation
- DAG workflow engine (7 node variants), VS Code integration, LSP intelligence

****Tech:**** TypeScript, Node.js, VS Code Extension API, JSON-RPC, LSP, Git worktrees

DMR-X — Universal AI Routing & MCP Platform

Lead Engineer & Architect | github.com/danny-dis/dmr-X

Single gateway accepting OpenAI, Anthropic, and Gemini wire formats, routing to 57+ provider adapters with dynamic cost/latency/quality scoring.

- Thompson Sampling bandit for dynamic routing with fallback chains
- Agent-as-a-Service runtime: durable sessions with resume/retry
- MCP server with stdio/SSE/HTTP transports
- Multi-tenant architecture with per-tenant keys, quotas, policies

****Tech:**** TypeScript, React, Vite, MCP, SQLite, 57+ provider adapters

N.O.E.S.I.S — Agent Fleet Collective Brain

Lead Engineer & Architect | github.com/danny-dis/N.O.E.S.I.S

Two-tier memory system where agents keep local memory while contributing to a shared temporal knowledge graph.

• Content-addressed object store for immutable evidence • Trust-scoring and deduplication across agent transcripts • Python insight workers for chunking, embedding, extraction, graphification • MCP adapter serving scoped, cited Context Slices to agents**Tech:** TypeScript, Python, SQLite, MCP, temporal knowledge graph

VoteChain — Blockchain Voting SaaS

Full-Stack Engineer | github.com/danny-dis/Decentralized-Voting-System

Multi-tenant blockchain voting where each organization gets isolated elections as individual smart-contract instances.

• VotingFactory + Voting contracts (Solidity 0.8.24, OpenZeppelin v5, Foundry) • Privy embedded wallet + MetaMask support • Postgres indexing with live SSE streaming to React frontend**Tech:** Solidity, Foundry, React, Postgres, SSE, Base L2

Ghost Factory — Polyglot Universal Builder

Architect & Engineer | github.com/danny-dis/ghost_factory

General-purpose build system targeting C, C++, Rust, Go, Java, Python, Web for Windows/Linux/macOS/Docker/ISO/firmware.

• Modular toolchain abstraction for multi-language, multi-platform builds • "Ghost-ify" pipeline for automated repository transformation**Tech:** Python, YAML toolchains, multi-platform build orchestration

EscrowBot — Non-Custodial Cross-Platform Escrow

Designer & Engineer | github.com/danny-dis/escrow-bot

Deterministic escrow bot for Telegram, Slack, and Discord where deposits, release, and refunds are enforced by smart contracts.

• Platform-agnostic core with adapters for Telegram, Slack, Discord • 2-of-3 multisig + HTLC dispute resolution (deterministic, no human judgment)**Tech:** TypeScript, Node.js, smart contracts, Telegram/Slack/Discord APIs

EDUCATION

BSc Computer Science — Muranga University of Technology (expected 2026)

ADDITIONAL INFORMATION

• **Timezone:** EAT (UTC+3) — full overlap with CET/CEST business hours • **Languages:** English (professional), Swahili (native) • **Work style:** Self-directed, async-friendly, strong written documentation
